EXPERIENCE

CRED <i>Security Engineer Intern</i>	Mar 2026 – Present Bengaluru, India
--	--

- Built an agentic AI pipeline using LangChain, LangGraph, and locally hosted Qwen models to validate data classifications from internal security tools, reducing manual effort by 35%.
- Enhanced an internal data security tool by adding broader database support, bulk false-positive remediation, and automated configuration generation, reducing team effort by 40%.
- Deployed and evaluated PentAGI on AWS EC2 using Docker to assess its suitability for vulnerability assessment, penetration testing, and cloud security workflows.
- Developed a Python automation using Boto3 to identify overly permissive AWS resource policies, reducing cloud attack surface by 6%.
- Configured DLP policies to prevent data exfiltration, managed user groups, and triaged security alerts.
- Identified unused IAM roles, stale identities, and inactive cloud resources, recommending least-privilege remediation to improve security posture.

Kirtane & Pandit LLP <i>Security Analyst Intern</i>	Jun 2025 – Jan 2026 Pune, India
---	------------------------------------

- Conducted Vulnerability Assessment and Penetration Testing (VAPT) for web applications, delivering critical findings to clients.
- Delivered CERT-In compliant security assessment reports, including detailed remediation guidance and vulnerability reproduction steps.
- Automated VAPT revalidation by integrating Burp Suite request-response data into Nodemation, reducing turnaround time by 12%.
- Developed an AI-assisted penetration testing tool using Gemma 3 4B via Ollama to autonomously generate and execute security testing tasks.
- Led phishing simulation campaigns, achieving a 76% success rate among recipients who opened the email.
- Developed Python scripts to analyze 5,000+ Nginx log entries, identifying bot crawler patterns to improve phishing campaign accuracy.
- Built and maintained Active Directory lab environments to test authentication, privilege escalation, and security configurations.

Freelance <i>Security Researcher</i>	Feb 2025 – May 2025 Pune, India
--	------------------------------------

- Performed Web Application Penetration Testing (WAPT), identifying vulnerabilities including broken access control, cross-site scripting (XSS), and information disclosure.
- Delivered professional VAPT reports with 15+ prioritized remediation steps aligned with OWASP and compliance frameworks.
- Handled responsible disclosure, coordinated with clients to fix issues, and re-tested to confirm remediation.

SKILLS

Skills: Python, C++, SQL, JavaScript, Bash, AWS, GCP, Docker, Linux, Git, Active Directory, LangChain, LangGraph, Ollama, Boto3, Burp Suite, Metasploit, Nmap, Wireshark, SQLMap, OWASP ZAP, Nessus, OpenVAS, OWASP Top 10, PCI-DSS, DPDPA

LICENSES AND CERTIFICATIONS

Cisco Ethical Hacker Link	Aug 2024
Ethical Hacking Essentials (EC-Council) Link	Mar 2024
Google Cybersecurity Professional Certificate (Google + Coursera) Link	Feb 2024

ACHIEVEMENTS

- Ranked among the top 25 participants out of 84,000+ nationwide in TCS HackQuest Season 10.
- Achieved a top 5% global ranking on the TryHackMe platform.
- Established the first-ever Cyber Security Club (MSOC) at MMCOE College.
- Mentored 80+ students in cybersecurity fundamentals, ethical hacking, and network security through hands-on workshops and live demonstrations.

PROJECTS

Spectra | [Link](#)

Jul 2026

- Built and published Spectra, a Chrome extension that audits HTTP security headers, detects security misconfigurations, and analyzes cookies and CORS policies across websites.
- Implemented premium features including bulk scanning and PDF report export with a one-time licensing model, and published the extension on the Chrome Web Store.

URL Classification Engine | [Link](#)

Mar 2025

- Developed a Python-based URL classification engine that monitors visited domains, extracts metadata, and classifies websites using machine learning for automated access control.
- Built a Flask-based admin dashboard for real-time URL inspection, manual allow/block controls, and classification audit logging.

VulnScout | [Link](#)

Nov 2024

- Built VulnScout, a Python-based crawler that extracts CVE data, CVSS scores, summaries, and publication details from vendor security advisory pages.
- This tool compares new security advisories with user assets and sends automatic email alerts when a relevant vulnerability is found.

EDUCATION

Marathwada Mitra Mandal's College of Engineering

B.E. in Computer Engineering

Pune, India

Nov 2022 – Jun 2026
